

STUDY ASSISTANT AGENT

NAME OF AN AI AGENT:

Study Assistant Agent

FORMULATION:

Graphical Representation:

Texture Form:

- **Sensor:** Takes the student's questions or study material as input.
- **Process:** It understands the student's input & decides what kind of help to provide.
- **Actuator:** Give the result to the student.
- **Environment:** It includes the student and the things they use for studying.

PEAS FRAMWORK:

- **P – Performance:** How well the agent helps the student learn and complete their tasks.
- **E – Environment:** The student, their device, and the study material.
- **A – Actuator:** Shows the result to the student.
- **S – Sensor:** Takes the student's questions or study material as an input.

ENVIRONMENT TYPES:

Observability: Type 2 (Partially Observable) because the agent only receives the information provided by the student.

Determinism: Type 2 (Stochastic) because the agent may give different responses depending on the student's input.

Episodes: Type 2 (Sequential) because the student's previous questions and responses can affect the next interaction.

Change: Type 2 (Dynamic) because the student can change the topic or provide new information at any time.

Values: Type 1 (Discrete) because the agent works with separate questions, answers, topics, and study tasks.

Agents: Type 1 (Single Agent) because only one AI agent is helping the student.
